

# International Space Station

- The International Space Station is available as a science platform to host Earth Science instruments
- For ISS hosted instruments, The ISS Program highly recommends that proposers request an interface and resource feasibility assessment prior to proposal submission in order to assess:
  - Instrument resource allocation requests/needs
  - Instrument/ISS technical interface requirements compatibility
  - Launch vehicle compatibility
  - ISS site availability and Field Of View (FOV) compatibility
- ISS will have a commercial earth pointing facility called MUSES that can host Earth Science instruments that require pointing
