EXPLOREEARTH

Earth Venture Instrument – 6 Pre-Proposal Conference Earth System Science Pathfinder Program Diane Hope – Mission Manager May 6, 2022

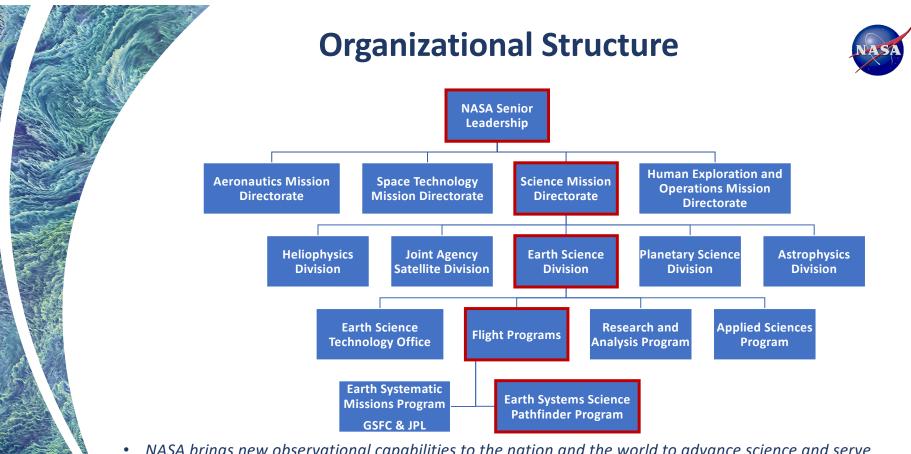

ESSP Program Overview

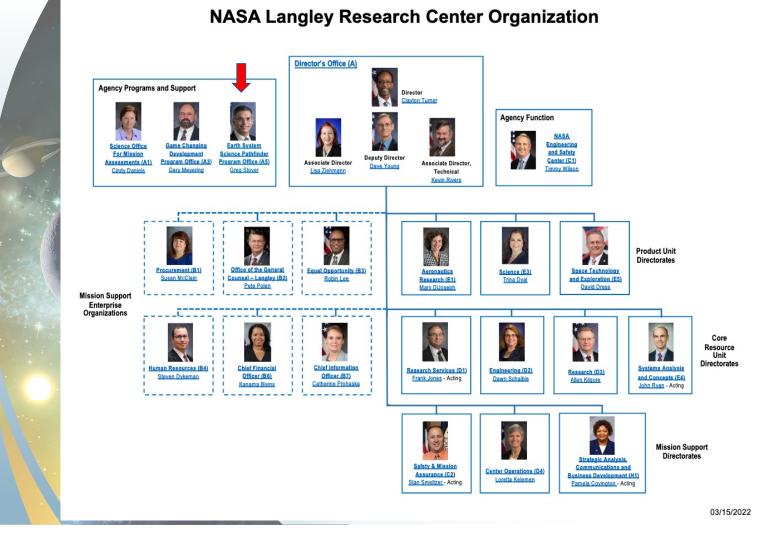

- The goal is to stimulate new scientific understanding of the global Earth system by:
 - developing and operating remote-sensing missions
 - conducting investigations using data from these missions
 - addressing unique, specific, highly focused requirements in Earth science research

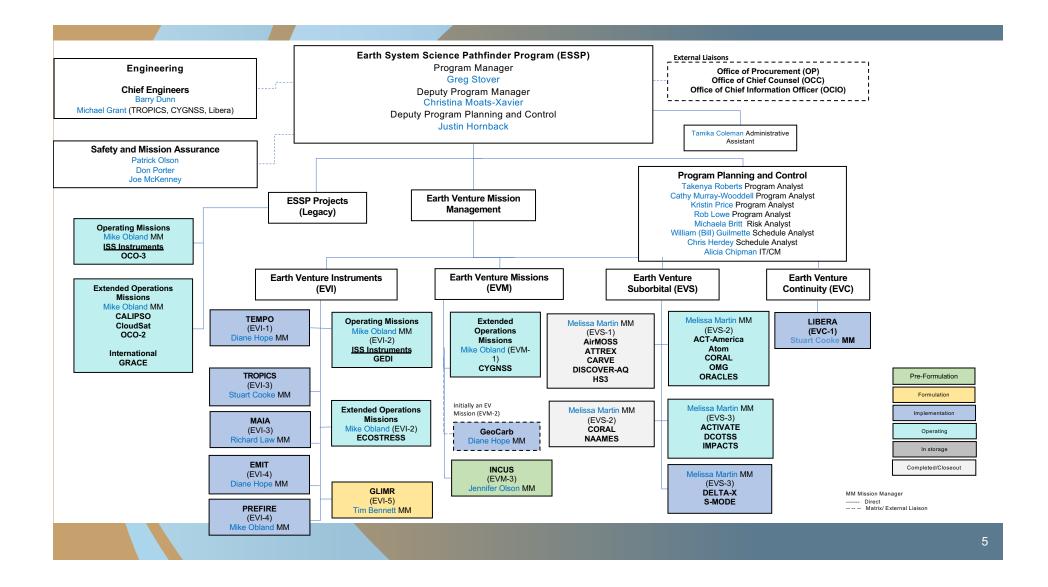

Projects in the ESSP portfolio are:

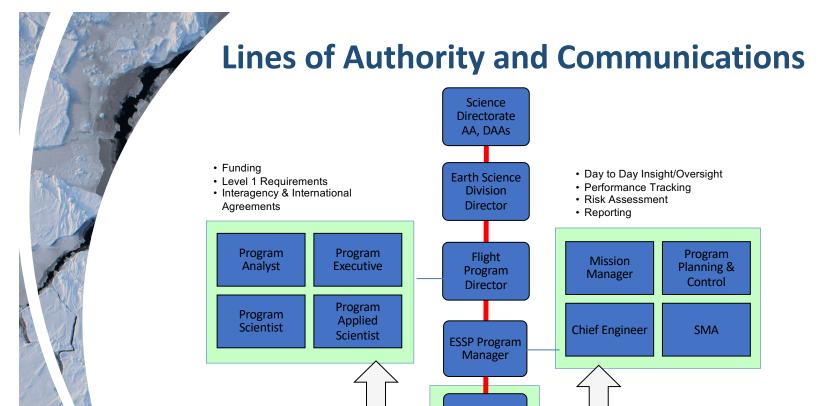

- Science-driven
- PI-led investigations
- Competitively selected
- Orbital or sub-orbital
- Implemented within cost- and schedule-constraints
- https://essp.nasa.gov/latest-news/

- NASA brings new observational capabilities to the nation and the world to advance science and serve society now and in the future.
 - Engaged in interdisciplinary Earth system science, NASA provides the rigorous scientific basis for answering tomorrow's questions.

NASA's Earth Venture Class

- The ESSP portfolio Earth Venture Class element has 4 strands:

EV Suborbital (EVS)

- Suborbital/airborne investigations
- 5-year duration
- Cost caped at \$150M per solicitation
- Solicited every ~4 years

EV Mission (EVM)

- Small complete missions
- 5 years to launch
- Class-D*
- Small-sat or standalone payload as part of larger missions
- Cost caped at \$190M
- Solicited every ~4 years

EV Instrument (EVI)

- Spaceborne instruments for flight on Missions of
- Opportunity (MoO)
- <u></u>
 system
 <a href="mailto:syste
- Class-C* or Class-D* allowable
- \$30M-\$100M total cost for development and operations
- Solicited every ~3 years

EV Continuity (EVC)

- Spaceborne instrument or missions
- Cost caped at \$150M per solicitation
- Solicited every ~3 years
- specifically seeks to lower the cost for longterm acquisition of key "continuity"

L

- observations, rewarding
- innovation in missionto-mission cost
- reduction through
- technology infusion,
- programmatic efficiency,
- and/or other means

*Four risk levels or classifications (A, B, C and D) have been characterized in the NPR 8705.4 Risk Classification for NASA Payloads by considering factors such as criticality to the Agency Strategic Plan, national significance, complexity, mission lifetime, cost and other relevant factors. Class C is medium priority, medium national significance, medium to low complexity and cost while Class D is considered low in all these aspects

Earth Venture Instrument - 6

- Instrument Investigations and SmallSat Investigations (including CubeSats)
- Cost capped at \$37M in FY24 dollars (with possibility of an additional \$5.3M in FY24 dollars for the NASA Science Enhancement Option)
- Instrument delivery ready for integration schedule capped within 4 years after the initial contract award date (nominally FY2023 FY2027)
- Risk classification: Payload Class D (low priority, high risk)
- Mission Category 3 (<\$250M, medium/low priority)
- Access to space outside of the PI-Managed Mission Cost (PIMMC)

"These missions should focus on fostering revolutionary innovation and on training future leaders of space-based Earth science and applications." Decadal Survey, 2007

Class D Risk Classification

- SMD has determined that EVI-6 will be a Class D mission
- Tailoring is allowable and is expected
- Decisions by the PI are expected to be in line with a Class D Risk Posture
- Defined in NPR 8705.4, "Risk Classification for NASA Payloads"

NPR 8705.4, Appendix B – Classification Considerations for NASA Class A-D Payloads

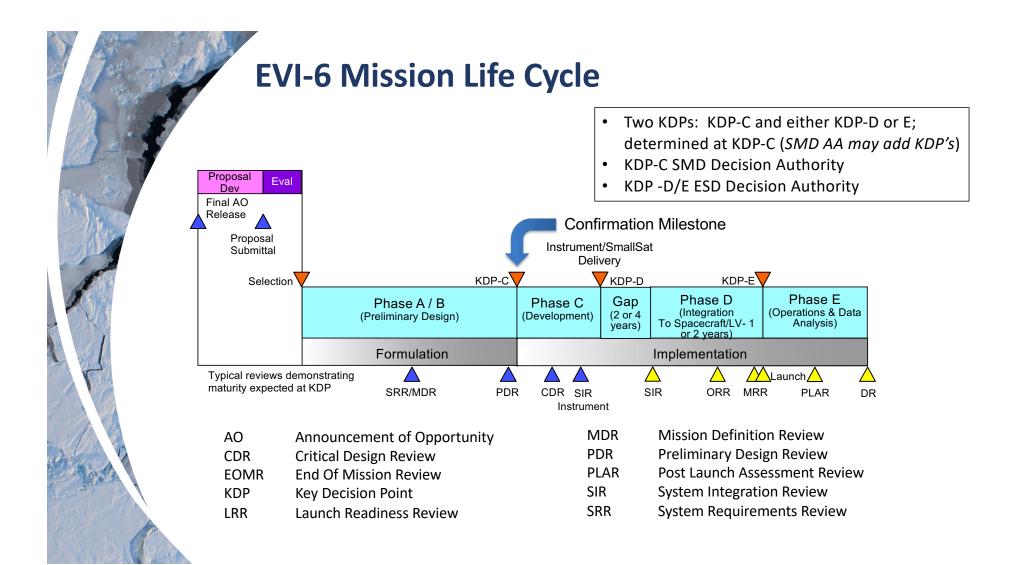

Characterization	Class A	Class B	Class C	Class D
Priority (Criticality to Agency Strategic Plan) and Acceptable Risk Level	High priority, very low (minimized) risk	High priority, low risk	Medium priority, medium risk	Low priority, high risk
National significance	Very high	High	Medium	Low to medium
Complexity	Very high to high	High to medium	Medium to low	Medium to low
Mission Lifetime (Primary Baseline Mission	Long, >5years	Medium, 2-5 years	Short, <2 years	Short < 2 years
Cost	High	High to medium	Medium to low	Low
Launch Constraints	Critical	Medium	Few	Few to none
In-Flight Maintenance	N/A	Not feasible or difficult	Maybe feasible	May be feasible and planned
Alternative Research Opportunities or Re- flight Opportunities	No alternative or re-flight opportunities	Few or no alternative or re- flight opportunities	Some or few alternative or re-flight opportunities	Significant alternative or re- flight opportunities
Achievement of Mission Success Criteria	All practical measures are taken to achieve minimum risk to mission success. The highest assurance standards are used.	Stringent assurance standards with only minor compromises in application to maintain a low risk to mission success.	Medium risk of not achieving mission success may be acceptable. Reduced assurance standards are permitted.	Medium or significant risk of not achieving mission success is permitted. Minimal assurance standards are permitted.
Examples	HST, Cassini, JIMO, JWST	MER, MRO, Discovery payloads, ISS Facility Class Payloads, Attached ISS payloads	ESSP, Explorer Payloads, MIDEX, ISS complex subrack payloads	SPARTAN, GAS Can, technology demonstrators, simple ISS, express middeck and subrack payloads, SMEX

Roles and Responsibilities

- NASA responsibility
 - Program administration
 - Access to space
 - Moderate insight, oversight
 - Project plan approval (at KDP C)
 - Reviewed for thoroughness, PI responsible for content choices
 - Limited NASA verification except for flight safety and interfaces
- PI responsibility
 - Defines approach to managing the project
 - Defines standards, processes and practices for mission assurance
 - Mission implementation (approach & execution)
 - Performance/Cost/Schedule/Risk management
 - Design guidelines
 - Peer reviews

NASA Insight

- Interactions between NASA and PI involve participation in Project Reviews and Technical Interchange Meetings, Science Team Meetings
- Weekly telecons/meetings keep communication open to understand implementation progress and foster discussion of issues
- Monthly reporting to NASA program coordinated with implementing organization reporting process & products
- NASA may enlist the support of Subject Matter Expert (SME) to provide assessments
 - Typically done in conjunction with the project's activity or tiger teams
 - SME observation/reporting can be used to support the project decision making process

Standing Review Boards

- NASA assesses technical, cost and schedule performance using Standing Review Boards (SRBs) for SRR/MDR, PDR, CDR, SIR or ORR
- Major Reviews
 - Conduct reviews during major transitions in the mission's phases
 - Identify gaps; compare plan vs. execution; cost, schedule and resource assessment
 - Identify and recommend solutions for technical and programmatic problems or issues
- Standing Review Boards
 - Convened by the implementing organization and Decision Authority (ESD) Program Office funds
 - SRB provides report to project, implementing organization, Program Office, HQ
 - SRB only involved in major reviews; not involved in day-to-day implementation
 - Small team
- Terms of Reference (ToR)
 - Developed in advance of major reviews with clearly defined entrance and exit criteria
 - Concurred with and signed by Program Office and Project
 - Approved by Decision Authority and implementing organization

Communications

- ESSPPO offered support outside of the PIMMC
 - Launch support
 - Small brochures
 - Mission in-orbit animations
 - Project videos
 - Social media video series, etc.
- PI responsibility within the PIMMC
 - Define ESSPPO communications support desired and provide input and collaboration on product
 - Website, if desired, development and maintenance
 - Mission updates, science, and new discoveries
 - Attendance at the ESSP Program Forums (biennially, next one ~Fall 2022)

Responsibility for Agreements

- Principal Investigator
- PI develops and approves all agreements between PI and other organizations (Investigation internal)
- Interagency agreements developed by PI, in coordination with NASA HQ and Program Office, signed by SMD AA
- International agreements developed by PI, in coordination NASA HQ and Program Office, signed by Office of International and Interagency Relations (OIIR)
- Program Office
 - Task Plans, Internal Task Agreements (ITA's), or Contracts between the Program Office and PI and implementing organizations established to document understanding of expectations and funding profile
 - Management/Development Approach
 - Scope of Work/Work Description
 - Schedule
 - Cost Estimate
 - Deliverables
 - Period of Performance

Contractual Award Process

- Upon selection, proposal team develops Statement of Work (SOW)
- NASA Mission Manager and selected proposal team, with guidance from the NASA Contracting Officer, finalize the SOW and the deliverables
 - Typically, a 4- to 8-month process from receipt of SOW to contract award
- The NASA Contracting Officer will:
 - Request revised cost proposal and negotiate based upon finalized SOW and contract type
 - Negotiate type of contract/terms and conditions based on best method to achieve the objective of the statement of work and project
 - Request certified cost and pricing data

The ESSP Program Office wishes you all good luck and is looking forward to working with you.
